

Topics in Experimental Neuropathology

Seminar description

Weekly seminar to discuss current and emerging topics in the study of neurological disease. Speaker chooses and presents topic of interest. Can include presentation of primary data, paper presentation or topic review.

Goals

- 1.) Learn clinical presentation of common neurological disease
- 2.) Learn effective diagnostic testing in the evaluation of common neurological disease
- 3.) Become familiar with neuropathological findings in surgical and autopsy evaluation
- 4.) Develop understanding for pathogenesis and prognosis of neurological disease
- 5.) Understand scientific basis of diagnostic and therapeutic principles
